

Cody Johnson

Product Owner · Product Manager · Digital Platform Operations

Austin, Texas [LinkedIn](#) [GitHub](#) [cody-johnson.com](#)

Technical Product Owner with experience building and improving digital platforms, internal tools, automation workflows, and analytics products. Skilled at translating business needs into user stories, acceptance criteria, backlog priorities, and release-ready requirements for engineering teams.

Background spans product ownership, software engineering, operational systems, data workflows, and stakeholder communication, with a focus on platform reliability, workflow clarity, and data-informed execution.

EXPERIENCE

CTX Motoworks

Assistant General Manager, Operations & E-commerce (Full-time)

JUL 2025 - MAY 2026

- Owned service, inventory, and e-commerce workflows as product systems; mapped intake, service, billing, and inventory lifecycles to identify bottlenecks and ship process improvements.
- Used operational data, queue age, capacity signals, and revenue trends to prioritize staffing and workflow changes, directly contributing to a \$90K service revenue increase in one month.
- Led internal platform direction for a Dealerspike alternative with integrated chat, payments, inventory workflows, and a Command Center analytics dashboard for KPI visibility and faster GM decision-making.
- Defined product requirements for catalog structure, data models, workflow design, and dashboard reporting to support scalable e-commerce and service operations.
- Designed and launched an aged-inventory liquidation workflow on eBay, defining pricing logic, listing cadence, and SKU prioritization; generated \$20K in three months and improved inventory turnover.
- Collaborated across sales, service, parts, and leadership teams to document workflows, clarify ownership, and improve execution across daily operations.

Lambda Curry

Product Owner (Contract, Full-time)

MAY 2025 - FEB 2026

- Owned backlog refinement, sprint priorities, user stories, acceptance criteria, and release coordination across e-commerce, consumer, and B2B product initiatives.
- Partnered with engineering, QA, and stakeholders to clarify requirements, manage dependencies, resolve scope questions, and keep delivery aligned with business priorities.
- Defined feature scope and acceptance criteria for a checkout redesign and friction-reduction initiative, contributing to a 12% first-week sales lift at launch and measurable funnel improvement.

- Used behavioral data, conversion trends, and retention patterns to prioritize fixes and product improvements, driving 10-25% retention improvement across a multi-product platform.
- Wrote PRDs for higher-risk features to lock scope early, define success metrics, document validation criteria, and secure stakeholder sign-off before engineering began.
- Communicated delivery status, risks, blockers, and scope changes across teams to support predictable sprint execution and release readiness.

Humane Society of New Braunfels (HSNBA)

Software Engineer (Volunteer, Full-stack & SQL Automation)

APR 2024 - PRESENT

- Built Python automation tools and data workflows to process and classify 19,000+ records, reducing manual data entry by 65% and data errors by 95%.
- Designed transformation logic and repeatable classification workflows to support reporting accuracy, geospatial analysis, and operational decision-making.
- Integrated external GIS data sources and APIs into internal workflows to enable automated district-level reporting.
- Documented data-handling logic and process steps to improve repeatability, auditability, and future workflow maintenance.

Texas Malibu

Sales Lead

APR 2021 - MAY 2025

- Implemented inventory management digitalization across 3 stores, increasing operational efficiency.
- Analyzed market trends and customer behavior data to drive strategic decisions, contributing to 10.1% market share growth in central Texas.
- Improved client satisfaction scores by 15% within 6 months through structured training on sales technique, product knowledge, and customer relationships.

PROJECTS

CTX Connect

Internal dealership operations & messaging platform

PRODUCT OWNER / BUILDER

React, TypeScript, Node.js, PostgreSQL, operational analytics

- Defined product requirements for an internal dealership platform connecting sales, service, inventory, customer messaging, payments, and operational reporting into one workflow layer.
- Designed the platform around real operational bottlenecks, including lead follow-up, service status visibility, aged inventory, quote management, and GM-level KPI reporting.

- Scoped a Command Center dashboard to monitor service capacity, revenue opportunities, follow-up risk, inventory movement, and workflow blockers for faster decision-making.
- Created user flows and data models for customer records, inventory items, service jobs, messages, payment status, and task ownership across departments.
- Prioritized MVP features based on operational impact, workflow urgency, and leadership visibility, balancing near-term usability with long-term platform scalability.

RideSense

Cross-provider cycling training insights platform

DEVELOPER

Next.js, React, TypeScript, Tailwind CSS, shadcn/ui, Python, Supabase Postgres, SQLite, OpenAI, pytest, Playwright

- Built an analytics product that unifies fragmented cycling training data into a single activity timeline for performance tracking, trend analysis, and data-driven training decisions.
- Developed a similarity-scored deduplication engine to collapse duplicate workout records across providers and prevent double-counted training load.
- Designed data models for provider connections, sync runs, raw activities, canonical activities, zone distributions, and evidence-backed Q&A records.
- Implemented deterministic analytics for weekly load, zone breakdowns, multi-week trends, regression detection, and evidence-backed AI responses.
- Built authenticated dashboard, sync, profile, ask, and connections flows with smoke coverage using pytest and Playwright.

Track Tuner

AI-assisted race setup and telemetry platform

DEVELOPER

Next.js, TypeScript, Node.js, RAG, OpenAI API

- Defined and built a telemetry logging platform that captures session data, vehicle setup, rider feedback, and track conditions to identify performance trends.
- Developed a RAG-based recommendation flow that connects historical session data to contextual setup suggestions.
- Validated product direction with real riders and refined data models, feature scope, and trackside usability from user feedback.

Windcast

Wind sports forecasting and session planning platform

DEVELOPER

React, TypeScript, Vite, Tailwind CSS, Leaflet, Open-Meteo API

- Built a mobile-first forecasting app that helps kiteboarders, wing foilers, and downwind foilers evaluate wind conditions and identify the best session windows.
- Developed a spot-specific scoring engine that evaluates wind speed, gust spread, wind direction, rain risk, unsafe launch conditions, and local thresholds to classify forecast windows as fire, good, maybe, poor, or sketchy.
- Implemented a forecast provider architecture with mock data support and Open-Meteo integration, normalizing hourly wind, gust, direction, rain probability, and temperature into reusable domain models.
- Built an interactive Leaflet map with saved spot markers, tap-anywhere forecast lookup, forecast-hour controls, and map-based discovery workflows.
- Created saved-spot management with local persistence, sport-specific wind ranges, unsafe directions, launch notes, unit preferences, and import/export support.

TECHNICAL SKILLS

Frontend

TypeScript, React, Tailwind CSS, shadcn/ui, Figma.

Backend

Node.js, Express, RESTful APIs, Medusa.

Testing

Vitest, Playwright.

Database & analytics

PostgreSQL, MongoDB, SQL, Google Analytics, Google Tag Manager, operational metrics, reporting, data workflows.

Product management

User stories, acceptance criteria, backlog management, Agile, Scrum, Kanban, Jira, Linear, Confluence, Excel, PowerPoint, roadmap planning, PRD writing, release planning, OKRs, KPIs, A/B testing, funnel analysis.

Platform operations

Process documentation, root cause analysis, production issue support, workflow optimization, stakeholder communication, cross-functional delivery.

AI & automation

Other

Stripe, Mux, iRacing SDK, Unity.

Python, LLM API integration, RAG, agentic workflows, vector databases, embeddings, LangChain, MCP.

EDUCATION & CERTIFICATIONS

- B.S. Advertising, Texas State University
- Harvard CS50
