RESUME

Cody Johnson

Full Stack Software Engineer · C#/.NET · TypeScript · React · SQL

Austin, Texas linkedin.com/in/codyjohnsontx ↗ github.com/codyjohnsontx ↗ cody-johnson.com ↗

Full-stack software engineer with experience developing business applications, integrating third-party services, and building reliable operational systems using C#/.NET, TypeScript, React, and SQL. Experienced in gathering requirements, designing solutions, implementing APIs, and supporting applications through testing and deployment. Combines hands-on engineering with product ownership and business operations experience, including practical AI integration and workflow automation.

TECHNICAL SKILLS

Languages & frameworks

C#, .NET, TypeScript, JavaScript, Python, SQL, React, Next.js, Node.js.

Databases & integrations

PostgreSQL, SQLite, REST APIs, Webhooks, Stripe, Twilio.

AI & automation

LLM APIs, RAG, AI workflow automation.

Testing & development

Vitest, Playwright, Git, CI/CD, Docker.

Delivery & collaboration

Git, CI/CD, code review, defect investigation, regression testing, technical documentation, requirements and acceptance criteria, Jira, Linear.

PROFESSIONAL EXPERIENCE

Software Engineer (Freelance)

APRIL 2024 - PRESENT

Oasis Sim Racing | Oasis Race Control

TypeScript, Next.js, C#/.NET 8, PostgreSQL, SQLite, REST APIs

- Sole engineer responsible for developing a full-stack racing venue platform integrating C#/.NET Windows applications, backend APIs, relational databases, and live leaderboards.
- Built a lightweight C# application that reads simulator telemetry directly from shared memory and transmits lap data to a Next.js application, with minimal impact on simulator performance.
- Implemented local SQLite storage, automatic retries, and idempotent event processing to prevent data loss during network outages and application restarts.
- Developed a monitoring system with approximately 20 alert rules, Discord notifications, AI-assisted diagnostics, and GitHub issue integration to support remote troubleshooting.
- Deployed and supported the system at a two-day event for Cavender Cadillac of San Antonio, where more than 100 guests participated in the racing experience.
- Verified application functionality with 373 passing C# xUnit tests and 1,082 TypeScript tests, including database integration and failure-recovery scenarios.

Diaz Martial Arts | Marketing Website

TypeScript, React, Next.js, NestJS, PostgreSQL, Stripe, Mux, Clerk, Expo

- Worked directly with the business owner to gather requirements, design solutions, and develop web and mobile applications supporting the school's operations.
- Developed a subscription video platform spanning a React frontend, NestJS backend, and mobile application, integrating authentication, billing, and video delivery through third-party APIs.
- Implemented webhook signature verification, duplicate-event prevention, and automated tests covering subscriptions, payment events, account permissions, and video access.
- Developed and maintained the school's live website, including responsive interfaces, lead capture, and calendar integration.

Humane Society of New Braunfels Area (HSNBA) | Data Engineering & Automation

Python, SQL, Selenium

- Developed automation tools to streamline administrative workflows, maintain animal records, and correct historical data within the organization's existing management platform.
- Implemented data validation, application logging, and error handling to improve reliability and support troubleshooting of automated processes.

CTX Motoworks

Assistant General Manager, E-commerce & Digital (Part-time)

JULY 2025 - MAY 2026

Attend | Dealership Operations & Messaging Platform

TypeScript, React, Next.js, PostgreSQL, Prisma, Twilio, OpenAI

- Designed and developed Attend, an internal business application connecting customer messaging, service workflows, follow-up tasks, and management reporting.
- Integrated Twilio SMS services with webhook signature verification, duplicate-message prevention, consent tracking, and access controls.
- Built AI-assisted workflows that analyze customer conversations, generate summaries, recommend next actions, and prioritize follow-up work.
- Worked directly with dealership staff to identify operational problems, gather requirements, and implement process improvements.

Lambda Curry

Product Owner (Contract, Full-time)

MAY 2025 - FEBRUARY 2026

- Managed requirements and delivery coordination for healthcare, consumer, e-commerce, and B2B applications, working directly with stakeholders, developers, and QA teams.
- Translated business needs into technical requirements, user stories, acceptance criteria, and implementation documentation.
- Participated in application design, defect investigation, regression testing, and release validation.
- Defined requirements and success measures for a checkout redesign that contributed to a 12% first-week sales increase.

PERSONAL PROJECTS

Trackday Tuner

AI-assisted race setup and session platform

TypeScript, React, Next.js, PostgreSQL, Supabase, OpenAI, Stripe

- Developed and deployed a full-stack application combining rider session data, relational databases, and AI-generated recommendations.
- Built a retrieval-augmented generation pipeline with input validation, output guardrails, and a 33-case evaluation suite integrated into CI.
- Implemented authentication, database access controls, billing integrations, automated testing, and application health monitoring.

DragonGlass AI

AI-powered Obsidian plugin

TypeScript, Obsidian API, OpenAI, Anthropic, Gemini, Ollama

- Developing an open-source AI assistant for Obsidian that searches, reads, and manages notes using local or cloud-based models.
- Built four streaming AI provider integrations with tool calling, shared conversation history, and a cancellable agent loop with input validation and execution limits.
- Implemented approval-based editing with diff reviews, change rejection, and stale-file detection to prevent unintended modifications or overwritten notes.
- Developed unit tests and validated functionality against a local Ollama model, passing all core scenarios and resolving issues identified during testing.

EDUCATION & PROFESSIONAL DEVELOPMENT

- B.S. Advertising | Texas State University
- Coursework: Harvard CS50; Full Stack Open; 100 Devs
